

TriPollar® POSE™ and STOP™ Hit the High Street with Boots launch

Ultragen's flagship beauty gadgets TriPollar POSE and STOP are this week launching into Boots pharmacy. These scientifically proven devices harness the latest clinically proven professional TriPollar RF technology, for easy-to-use, at-home beauty anti ageing treatments. Previously only available from Harvey Nichols, NEXT and Selfridges the Boots launch will make these must-have gadgets more accessible to all. TriPollar STOP will stocked with Boots at an introductory price of £250 during the festive season representing 40% discounted price.

Tel-Aviv, Israel ([PRWEB](#)) October 26, 2009 -- Ultragen's flagship beauty gadgets TriPollar POSE and STOP are this week launching into Boots. These scientifically proven devices harness the latest clinically proven professional TriPollar RF technology, for easy-to-use, at-home beauty [anti ageing](#) treatments.

For the body, [TriPollar POSE](#) works on the upper arms, thighs, abdomen and buttocks to help create a smoother, more defined silhouette. In recent clinical trials it was found to tighten lax or sagging skin, generate inch-loss and reduce the appearance of unsightly cellulite and visible signs of stretch marks.

For the face, [TriPollar STOP](#) literally stops the clock and turns back the signs of ageing by boosting the skins dermal collagen production to improve the appearance of sagging jaw line, reduction of fine-lines and wrinkles. In a recent clinical trial done in Paris all participants showed visible improvement after the first treatment and 86% of testers said their skin looked younger and/ or more radiant.

Renowned anti-ageing expert, Dr Ghislaine Beilin (M.D. France), says that:

"TriPollar technology has proven to be an effective anti ageing solution for tightening skin and erasing wrinkles and fine lines. Migrating the same technology to a device that can be used in the home will enable more consumers to access effective anti-ageing treatments." Dr. Beilin has been working with TriPollar systems since the inception into the international market.

A newly published peer review medical and histopathological studies of the TriPollar devices confirms the production of new collagen by up to 50%. Both devices give the user signs of improvement from the first treatment, with the results continuing to improve through regular use over a six-week course of treatments.

Zion Azar, Chairman of Ultragen and inventor of the TriPollar technology said "we're excited to be launching TriPollar POSE and STOP into Boots in time for Christmas. Everyone deserves the right to look and feel good, but sometimes Mother Nature needs a helping hand and these products are just the thing! The partnership with Boots will mean that more people will have access to our devices and be given the chance to refresh the look of their skin without having expensive invasive treatments".

Previously only available from Harvey Nichols, NEXT and Selfridges, as wells as on-line from <http://stop-age.com> website, the Boots launch will make these must-have gadgets more accessible to all.

TriPollar STOP will be stocked with Boots at an introductory price of £250 during the festive season representing 40% discounted price

TriPollar POSE will be stocked with Boots at the RRP of £349
